SUBJECT: INTRODUCTION

INTRODUCTION

This document has been established in order to serve as control procedures for a FAA Repair Station Capabilities List for FAA Repair Station #2RZR007C issued to RMZ AVIATION, LLC. The Accountable Manager will maintain the Capabilities List. Two master copies of the Capabilities List will be produced, one will be assigned to the Repair Station and the other will be sent to the Atlanta Flight Standards District Office – 11 to be used as an official file copy.

PROGRAM INTENT

This program is intended to allow the repair station to submit a list of approved repair capabilities to the FAA by listing the manufacturer, model, part number and description of the part to be repaired and submitting it to the controlling FAA FSDO. The Accountable Manager for the repair station will ensure that the repair station has the required capabilities with regard to trained and qualified personnel, technical data, adequate tools and equipment to perform the repairs. The Accountable manager will submit a new Capabilities List to the FAA based on meeting the above requirements within 72 hours of beginning the repair and can begin the repair in accordance with the written request without prior acknowledgement from the FAA provided a self evaluation has been completed.

REVISIONS

Revisions to this manual will be prepared by the Accountable Manager and submitted to the FAA FSDO. A list of effective pages will be issued with each revision so each manual can be checked and kept current. In addition, a History of Revisions will be kept to trace the reasons for changes. While this Capabilities List and the Repair Station/Quality Control Manual are tied together, they are separate documents.

METHODS OF REPAIRS

The repair, alteration or overhaul of all parts will be performed in accordance with all current Federal Aviation Regulations, manufacturer's data, drawing, specifications and bulletins and other FAA approved technical data. This repair station will not maintain or alter any item for which it is not rated and does not have the required technical data, equipment, materials, facilities and trained personnel.

N

SELF EVALUATION

At any time that a significant change is made, as determined by the Accountable Manager, the repair station must perform a self evaluation relevant to that change to determine that the repair station still has all of the housing, facilities, equipment, material, technical data, processes and trained personnel in place to perform the work on the article as required by Part 145.
